MOVEABLE FLOORS

Always the right depth

A moveable pool floor allows you to infinitely adjust the depth of your pool. With it, your pool offers optimal comfort, swimming pleasure and possibilities for every group of users.

Inducon designs and produces your swimming pool floor entirely according to your wishes: with a tilting deck, integrated steps and variable sections. The movable floor can be installed with a very low build-in height, so it affects the pool depth in existing pools as little as possible. The movable floor does not compromise on safety, ease of use and water hygiene.

The floor moves by means of the push-chain system. This is an extremely strong and solid system which is driven by electric motors underneath the deck. This system hardly requires any structural modifications due to the lack of moving and/or mechanical parts running through the pool rim. The pool floor also remains free of cabling and mechanics which makes it a clean and slim solution.

In its highest position, the movable floor has a covering and insulating function. This ensures a considerable saving on the pool's energy costs. In addition, it reduces the evaporation of pool water and chemicals, which leads to less condensation and thus less corrosion of the building and inventory.

De Inducon beweegbare vloer

- Any desired fixed or sloping water depth
 - Forms an insulating cover
 - High load capacity and stability
 - Finish of your choice; plastic, tiles, natural stone
 - Very easy to operate
 - Numerous options available
 - Requires hardly any structural modifications
 - Also available for pre-existing baths

FLOORS PUBLIC

From toddler classes to diving lessons and everything in between

The height position of the Inducon floor is fully automatically adjustable, both horizontally and tilted. In the highest position, the floor transforms your pool into a sturdy platform with an insulating function.

The public sector requires user-friendly, robust and safe solutions. Inducon understands this like no other. Because we develop projects specifically to the wishes of the customer, our installations fit both new and existing pools. There are numerous options available. For example, you can equip your bath with a lift for people with disabilities, a slope or integrated and fully automatic stairs. When the floor only covers half of a pool, it is fitted with a moving lid.

FLOORS PRIVATE

Pool becomes terrace, terrace becomes pool

A movable floor allows you to change the entire decor of your pool and its surroundings at the push of a button. Aesthetics and functionality go hand in hand. Inducon understands that you are looking for an efficient solution that fits into your scenery.

Inducon offers customised solutions. For example, a floor can be fitted with an integrated staircase or platform. The high load-bearing capacity makes the floor suitable for heavy materials such as tiles of natural stone. The surface is strong enough to be used as a terrace or dance floor. In its highest position, the floor forms an even surface together with the stairs and the surrounding platform. In this way, it directly insulates and covers the basin and is completely child-proof.
